

Title: **Ancillary Services, Outside Providers, and CHCS**

Session: **W-4-1530**

Objectives

- Ancillary Services' role in the CHCS Provider File
 - Impact of errors
 - Outside provider entry in CHCS
- CHCS Provider File Facility Report Card
- Provider Details Report
- Site-specific Provider File performance metric
- Common Provider File errors
- Useful tips
- Training material

Ancillary Services - Initial Entry Point for Outside Providers

- Approximately 91% of all active CHCS providers are classified as “Outside Providers”
- Key ancillary personnel have the ability to enter provider information into CHCS for outside providers. This streamlines the process for patients who see providers outside the MTF and obtain ancillary services from the MTF
- Pharmacy personnel enter the majority of these providers; however, Laboratory and Radiology may enter them as well
- It is crucial each staff member with this access ensures each outside provider entry is accurate

Impacts of Provider File Errors

- What are the potential impacts of incorrect or null data in the CHCS Provider File?
 - Patient Safety
 - Revenue
 - Workload
 - Data Integrity

Impacts of Provider File Errors

- How is patient safety affected when an outside provider is entered into CHCS incorrectly?
 - Incorrect naming convention, generic provider names, and duplicate providers in CHCS could possibly compromise patient care when unable to identify the provider
 - Example: patient results are not reviewed or relayed to appropriate provider due to the inability to identify the correct provider, DOE,J does not have the entire first name spelled out, cannot confirm correct provider

Impacts of Provider File Errors

- How is revenue affected when an outside provider is entered into CHCS incorrectly?
 - Third Party Insurance claims are rejected due to null and duplicate National Provider Identification (NPI) numbers
 - Third Party Insurance claims are rejected due to null or incorrect HIPAA Taxonomy Codes
 - Incorrect naming of a provider can cause a rejected claim when unable to identify the provider's legal name

Impacts of Provider File Errors

Prescriptions processed from MTFs through Pharmacy Data Transaction Service (PDTs) without an NPI Number.

Service	FY10 Total Prescriptions	Total Cost
AIR FORCE	636994	\$21,580,836
ARMY	2914501	\$73,571,221
COAST GUARD	54148	\$1,389,974
NAVY	2741827	\$80,589,053
Grand Total	6347470	\$177,131,085

Approximately 8% of AF patients have Other Health Insurance (OHI), which equates to 50,959 prescriptions, representing \$1,726,466 in potential lost revenue.

Impacts of Provider File Errors

- How is workload affected when an outside provider is entered into CHCS incorrectly?
 - Incorrect location of a provider could affect pharmaceutical studies which in turn could impact annual/mid-year review of pharmacy workload and funding requirements

Impacts of Provider File Errors

- How is data integrity affected when an outside provider is entered into CHCS incorrectly?
 - Incorrectly entering a provider's name in CHCS creates a larger margin for error due to the lack of appropriate naming convention
 - Example: provider Doe,John is entered in CHCS as Doe,J the first time around, a different patient returns with a script and the user enters Doe,John correctly the second time around, this causes a duplicate in CHCS

Impacts of Provider File Errors

- Incorrectly entering the primary hospital location for an outside provider causes poor tracking of internal and external provider location, which can ultimately affect the billing process
 - Example: Outside provider is entered with a B*** MEPRS location instead of FC** MEPRS location. B*** MEPRS codes indicate in-house providers, which triggers the billing system to look for an episode of care to link the ancillary order to. Therefore, if the patient has Third Party Insurance, the prescription claim will not flow through the billing system without human intervention

Ancillary Provider Entry Screens

- The following pages/screens in CHCS are used by Pharmacy, Laboratory, and Radiology staff when entering a new outside provider and are critical in ensuring:
 - Successful Third Party Collections
 - Preventing potential patient safety issues
 - Maximizing workload
 - Improved data integrity

CHCS requires that a DEA # or license # is entered for outside providers, if you only enter one but have both choose DEA# over the license# and enter

DA Provider Add Menu NPI Info

- The National Provider Identifier is a 10-digit numeric code that is unique to each provider
- This data element is required for all providers flagged as a provider
- The NPI has a direct impact on Third Party Collections (TPC)
- A null NPI will result in a rejected TPC claim resulting in loss of revenue for the MTF
- Use the following links to obtain provider information to include NPIs for providers
 - <https://nppes.cms.hhs.gov/NPPES/Welcome.do>
 - <https://www.geoaccess.com/ncpdp/po> (this is the HCIdesa Web site that requires purchasing of licenses)

Dec-10	50423	46%	54%

Avoiding Common Errors - Null NPI Field

- The most common error is a null NPI field, and this error has the greatest negative impact on Third Party Collections (TPC). It is not a required field in CHCS (it can be left blank); therefore, many people ignore it
- To file any claims for TPC reimbursement, this number must be present
- Determine the correct NPI number by using the Web sites below to confirm the correct NPI number
 - <https://nppes.cms.hhs.gov/NPPES/Welcome.do>
 - <https://www.geoaccess.com/ncpdp/po> (this is the HCidea Web site that requires purchase of licenses)

Avoiding Common Errors - Provider Class/Signature Class Relation

- How is the Provider Class related to the Signature Class?
 - Each Provider Class in CHCS should be associated with one of the following Signature Classes:
 - **“0” Clerk with Limited Ordering**
 - This level of authority is used for administrative support personnel and must be countersigned prior to the order becoming active
 - **“1” Nurse**
 - This level of authority can write and activate orders, but these orders must be also signed by an HCP
 - **“2” Provider Requiring Countersignature**
 - Similar to a nurse signature class, orders can be written but a countersignature is required by an HCP

Signature Classes in CHCS (continued)

- **“3” HCP**
 - This level is standard physician authority and is the highest level needed
- **“4” Countersigning HCP**
 - A generic countersignature authority that could be used to countersign all orders requiring countersignature
- **“99” Outside Provider**
 - Providers not on your MTF staff (civilian HCPs or HCPs from other MTFs); but may write prescriptions for patients entitled to benefits from your MTF. This signature class is used for outside prescriptions, Lab, and Rad orders

Signature Class Examples

- Below are examples of Provider Classes with their appropriate corresponding Signature Class

PROVIDER CLASS	SIGNATURE CLASS
External Provider	99 (Outside Provider)
Physician	3 (HCP)
Technician	1 (Nurse)
Nurse	1 (Nurse)
Clerk	0 (Clerk with Limited Ordering)
First Year Resident	2 (Provider Requiring Countersignature)

Avoiding Common Errors - Users Create Provider Class with Null Signature Class

- CHCS was designed to allow users to create new Provider Classes “on the fly” as needed. However, each Provider Class should have a corresponding Signature Class associated with it and users are not prompted to enter one through quick entry. Therefore, without realizing it, users randomly add provider classes in CHCS with a null

```
PROVIDER: TESTING, PROVIDER
          Name: TESTING, PROVIDER
          Provider Flag: PROVIDER
Select PROVIDER SPECIALTY:

          HCP SDR-ID:
          Class: I CAN PUT ANYTHING HERE

Are you adding 'I CAN PUT ANYTHING HERE' as
a new PROVIDER CLASS (the 52nd) ? Y
```

This is a free text field and will accept anything typed in. User will be prompted with “Are you adding....as a new PROVIDER CLASS.

If this prompt appears the user should always answer **NO**, they will then be given an option to see the list of current

Avoiding Common Errors - Null or Incorrect Signature Classes

- CHCS administrators should review Provider Classes and corresponding Signature Classes periodically. A simple adhoc via Fileman will print all active Provider Classes with their corresponding Signature Class

ADHOC ENTRY

Menu path: FM > PFE

Output from what file: **PROVIDER CLASS**

Sort by: **NAME**

Start with NAME: **FIRST**

First Print FIELD: **NAME**

Then Print FIELD: **SIGNATURE CLASS**

Then Print FIELD:

Heading: PROVIDER CLASS LIST//

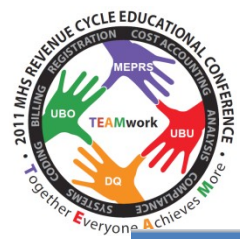

Footnote:

Store Print logic in Template:

DEVICE:

Example: A Signature Class is not attached to this provider class of "CIV". Users should not be entering new Provider Classes in CHCS

Provider Specialty Code (PSC) - HIPAA Taxonomy Code Relation

- Provider Specialty Codes (PSCs) are linked in CHCS to a corresponding HIPAA Taxonomy Code. You will be required to look up the Taxonomy number and cross reference it to the correct PSC
- Determine the provider's correct HIPAA taxonomy code through HCidea or NPPES Web site
 - <https://nppes.cms.hhs.gov/NPPES/Welcome.do>
 - <https://www.geoaccess.com/ncpdp/po> (this is the HCidea Web site that requires purchase of licenses)
- Use the list provided to match the Provider Specialty Code with correlating HIPAA Taxonomy Code listing

PSC with HIPAA
Taxonomy Codes

Example: Provider Specialty Code (PSC) - HIPAA Taxonomy Code Relation

CHCS Provider Specialty	CHCS Code	Taxonomy
GENERAL MEDICAL OFFICER	000	208D00000X
FAMILY PRACTICE PHYSICIAN	001	207Q00000X
FAMILY PRACTICE PHYSICIAN RESIDENT/INTERN WITH LICENSE	003	208D00000X
EMERGENCY PHYSICIAN	004	207P00000X
EMERGENCY PHYSICIAN RESIDENT/INTERN WITH LICENSE	005	208D00000X
EMERGENCY PHYSICIAN RESIDENT/INTERN WITHOUT LICENSE	006	390200000X

Example: the HIPAA Provider Taxonomy Code is incorrect and does not match the Provider Specialty Code

Primary Hospital Location Error Examples

- Hospital Location Error Examples:
 - Doe, John C is an outside provider with an FCCA (Support to Non-Federal External Providers) MEPRS code but has a Signature Class of 3 (HCP) which is for providers working in the MTF
 - Doe, Jane A has a Signature Class of 99 (outside provider) but has a B*** MEPRS code
 - Doe, John K is an outside provider with an FCCA (Support to Non-Federal External Providers) MEPRS code but is actually a provider from another MTF and should have a MEPRS code of FCDA (Support of other Military Activities)

DEA/License # Error Examples

- DEA/License # Error Example:
 - Doe,John A has a provider flag of provider but does not have a DEA number or license number
- A DEA or license number is a required field for an external provider profile
- DEA number is preferred
- Populating the DEA number will allow for future search criteria in the HCIDEA Web site

Useful Tips

- When researching data on the NPPES and HCidea Web site, copy and paste
 - Example, copy the NPI number from the Web site
 - Reduces potential errors
 - Increases your efficiency
- Search by DEA number on the HCidea Web site
 - If DEA number is available
 - Useful in finding a provider if name is incorrect in the provider file

Training Material

- Slides that provide step-by-step instructions to correct provider file errors are available on Vector Check
- <https://vc.afms.mil/afmoa/sga/sgar/sgardq/default.aspx>
